## BEHAVIOURAL CHANGES ASSOCIATED WITH PAIN IN COMPANION ANIMALS

This book deals with pain in companion animals and how it affects their welfare, health and, of course, behaviour. It describes the difficulties encountered, throughout history, to finally reach the conclusion that animals and humans share the same neurophysiological mechanisms to feel pain, and what their sensitive pathways are. It then goes deeper into the changes that pain can cause in the behaviour of dogs and cats and the tools available to the veterinary surgeon to control it.

## ESSENTIAL GUIDES ON CATTLE FARMING BOVINE MASTITIS

Mastitis is the inflammation of the mammary gland and udder tissue, and represents a major endemic disease of dairy cattle. It occurs as an immune response to bacterial invasion of the teat canal by variety of bacterial sources present on the farm or as a consequence of chemical, mechanical, or thermal injury to the cow's udder. There is sometimes permanent damage to the udder. Severe acute cases can be fatal and lactations may be compromised despite of the apparent recovery of the mammary tissues.

## THE PERIPARTUM COW: PRACTICAL NOTES

The cow's peripartum period from a practical and dynamic point of view, explained through theoretical explanations and a huge collection of clinical cases. Normally, disorders or conditions occurring in the peripartum period are not independent events; they are the result of the interaction of several events occurring over time. The authors highlight here the importance of assessing bovine pathologies as a whole. It is the only manner for the clinician to anticipate conditions that may appear during the peripartum period.
